

Utforskande analys av - jämförelse mellan samma dataset med 200/500 etikettering

Öppnade dokument i GoogleDocs i och med att det är vad Labelf har suttit och utvecklat för mest.

Testmål: Jämföra etiketteringen i de olika dokumenten och se om det finns markanta skillnader. Främst i labelfs etikettering.

Notes:

- Labelf lärde sig snabbt hur vi tolkar 'electrical input error', vi tolkar det som att det är en användare som har fått ett felmeddelande som de vill ha hjälp med. Redan på datasetet med 200 frågor, så kategoriserade Labelf bra. I 500 kan man se att vi som user har valt samma som Labelf ville på 200
